CAREER TIPS

What Is a Startup?

The term startup refers to a company in the first stages of operations. Startups are founded by one or more entrepreneurs who want to develop a product or service for which they believe there is demand. These companies generally start with high costs and limited revenue, which is why they look for capital from a variety of sources such as venture capitalists.

Advantages and Disadvantages of Startups

Startups tend to be more relaxed in nature, making the workplace more of a communal experience, with flexible hours, increased employee interaction, and flexibility. Startups tend to also have better workplace benefits, such as nurseries for children, free food, and shorter workweeks.

The work at startups can also be more rewarding as innovation is welcomed and managers allow talented employees to run with ideas with little supervision.

One of the primary disadvantages of a startup is increased risk. This primarily applies to the success and longevity of a startup. New businesses need to prove themselves and raise capital before they can start turning a profit. Keeping investors happy with the startup's progress is critical. The risk of shutting down or not having enough capital to continue operations before turning a profit is ever-present.

Long hours are characteristic of startups as everyone is working toward the same goal—to see the startup succeed. This can lead to high-stress moments and sometimes compensation that isn't commensurate with the hours worked. Competition is also always high as there tend to be a handful of startups working on the same idea.

Pros

- More opportunities to learn
- Increased responsibility
- Flexibility
- Workplace benefits
- Innovation is encouraged
- Flexible hours

Cons

- Risk of failure
- Having to raise capital
- High stress
- Competitive business environment.
